Resistant Materials / Design and

Technology

I see myself as an open, honest and approachable person, with an adaptable and flexible mindset. I have good communication skills and am comfortable asking for help, support and guidance should I need it. I have good time management skills and am good at prioritising the changing demands of a workload. I am open and welcoming to project feedback, accepting that it is not always positive as it gives me opportunity to learn and develop.

I have good problem solving skills and have applied this to every role I have undertaken. An example of this; we had an issue with Machine 3 y-axis that we were unable to overcome mechanically. So, in order to resolve this I calibrated the y-axis to never go to full extension, as this was causing excess stress on the screw, preventing the machine from working effectively and requiring replacement screws on a regular basis. Therefore saving downtime and unnecessary cost.

I am currently seeking employment within the development industry, I have completed study on HTML, CSS3, JavaScript, React and Redux. I am currently working on making small React projects to help gain hands on experience.

I enjoy development as I find it challenging yet rewarding. I enjoyed working with technology in my daily work and also miss the dynamic of development and the challenges and continuous learning that are associated with it.

Job History

Bawtry Carbon International

November 2016 – Present

My role at Bawtry Carbon International is Production Operative. During my time at Bawtry Carbon International some of the tasks I performed were:

When I returned to Bawtry Carbon, initially I was in the same role as before. However my skills and expertise enabled me to work in more complex, computer aided roles.

Running of the KHD press; which is a large eccentric press that is used to produce the raw cathode which must then be measured and the density calculated based on size and weight, this stage of the process is paramount to the end quality of the product

The cathodes must be made to a specification and adjustments to the batching, mixing and pressing process must be altered to assure specification is adhered to. Adjustments require good communication between the KHD team

I was on the KHD press for around 6 months and have been used to cover as required to the present day

I was then moved onto the Wassmer, which is a collection of five CNC machines, which I have been working on for just over 3 years

The role on the Wassmer is to run and maintain the CNC equipment, which includes some mechanical maintenance, including the automatic greasing system and calibrating the machinery

The purpose of the Wassmer is to machine cathodes into the final product and we generally work to a tolerance of 2mm

My role involves creating recipes and setting the machine up for new cathodes Measuring cathodes and adjusting / calibrating machinery to comply with specifications

Monitoring the dust extraction system, including a grading system and placing graded material in specified areas for present/ future use

Operating FLT, including one with a unique attachment for lifting cathodes as well as a normal FLT. Both are 4 ton capacity trucks

I was also responsible for packaging the cathodes on specially made pallets or crates ready for finishing by the packing department

I have worked both a 12 hour continental shift and 8 hour days, nights and afters rota at Bawtry Carbon. I have worked overtime as required

Job History Continued

Omega PLC

November 2015 – October 2016

My role at Omega PLC was a General Operative. Some of the tasks I performed were:

Picking panels ready for production

Assembling units

Cleaning units

Fitting shelves, drawers, hinges and corner posts

Quality inspection

Bawtry Carbon International

June 2015 – October 2015

My role at Bawtry Carbon International was Production Operative. During my time at Bawtry Carbon International some of the tasks I performed were:

Batching and mixing of monolithic products

Production of mortars and pastes

Performing sampling and testing of products

Data input and checking conformance of products

Packing products ready for dispatch / storage

Working to ISO 9001:2008 Quality standards and ISO 14001:2004 Environmental standards

Ensuring strict health and safety rules were abided by

Unfortunately all agency staff had to be let go due to financial reasons.

ABP Doncaster

June 2010 – June 2015

My role at ABP Doncaster was an IT Technician. As part of my role at ABP I have performed a wide range of tasks, which included:

Prioritising work load to ensure deadlines are met in a timely manner

Developing and supporting internal systems to ensure smooth operating of departments, this included making a PHP based Downtime recording system for the factory.

This also linked to a Microsoft SQL server, which I had written stored procedures for. This also included a reporting service powered by Microsoft Power BI, which would send daily reports etc

Supporting payroll as the software had many glitches that needed to be overcome

Testing backup media to ensure

Maintaining the WSUS server and ensuring all clients are up to date and WSUS is working

Maintaining Symantec anti-virus and ensuring software is up to date, scans are working and the site is safe from viruses and other malicious software

Arranging warranty repairs and repairing equipment when applicable. This was anything from printers to phones.

Ordering bespoke equipment, including parts and replacements for factory systems

Office support, this was around 150 computers and 20 printers

Factory support, including processing, despatch and intake, around 50 computers and bespoke equipment

Installing and setting up software, anything from Windows to bespoke software

Personal Interests

In my free time I enjoy working on my cars, I have worked on cars since I was quite young helping my father as he built several projects.

Playing games on my PC, I play several team based games and have ran my own groups in the past requiring co-ordination of up to 40 people. I like to play games to both challenge myself and relax.

Listening to music, watching TV series and movies. I really enjoy music and find it can be good for motivation.

More recently I have been working on small development projects and have found it very rewarding to see the product develop and also the final product.
